---

Here's today's update for Hood Junior High School – Odessa, TX

- All 700 student lockers have now been surveyed. Two were found to be contaminated. Contents were removed and staged for disposal.
- ECISD Contractors were delayed by unavailability of “mercX” floor cleaner to treat the classroom and hallway floors.
- EPA and ECISD confirmed that upon walking in hallway and classrooms- foot coverings were monitored at levels exceeding 20,000 ng/m3 (well over 3,000 ng/m3 clearance value). This problem still needs to be addressed before clearing school.
- EPA cleared home of student who was known to have handled mercury and whose locker was found to be contaminated.
- ECISD Contractors will have a night crew working tonight to clean floors with MercX in an attempt to “pass” a test where shoe coverings are tested after entry.
- Air Sampling is now planned for tomorrow morning
- A meeting with school officials is planned for tomorrow at 845 am.
